Deputy / Assistant Commissioner,
 Dept. of Agrarian Development,

..... District.

To obtain cultivation targets for subsidized fertilizer distribution programme – 2020 / 21 Maha season

Timely distribution of subsidized fertilizer for paddy cultivation is a national requirement. Therefore cultivation extents during 2020 / 21 Maha season should be estimated earlier. To calculate the fertilizer requirement in advance following process should be implemented.

1. Take necessary action to do paddy cultivation extents estimation for each Agrarian Service Centre area separately under three irrigation types (Major, Minor, Rain fed) in hectares (Ha) in your district and prepared in two copies as per the attached Format (01) with the recommendation of the District Fertilizer Sub-Committee & with the approval of the District Secretary. One copy should be sent to the National Fertilizer Secretariat on or before 17.08.2020. The other copy should be certified by the 'C' committee of Agricultural Project Implementation & Supervision Committees (APISC) and sent to the Commissioner of Agrarian Development (Services) on or before 10.08.2020.
2. Estimations should be done based on previous progress of consecutive five (05) Maha seasons starting from last Maha (2019 / 20 Maha) and if fallow paddy fields or new paddy fields have been harvested, the details of these quantities should be specially mentioned. Progress for the last five consecutive Maha seasons should be noted on the attached format (02) and sent with the above format (01).
3. If your district will plan to do OFC or Vegetable cultivation in paddy fields when water shortage will occur, such land extents should be separately estimated and will included in the given format, Format (01).
4. With the estimated formats [Format (01) & Format (02)], copy of fertilizer coordinating committee meeting minute should be attached.

Kindly pay your attention on this considering as a priority work.
